Authorized summary regarding the BESA seal of approval for the HiEnergy “Power Seat Car”

The BESA tests were carried out by International Association of BESA in Austria on behalf of the company IPC Europe UG, Norbert Heuser, on the energetic effectiveness of “POWER SEAT CAR” from the HiEnergy product series.

The tests clearly have shown that the “POWER SEAT CAR” is capable of nullifying negative biologically important effects while energizing (energy-increasing) positive effects.

The BESA “after” tests carried out within the spherical range of the “Power Seat Car” showed significant improvements in the measuring circuit compared to the “before” test.

All BESA tests were carried out according to the requirements for the BESA projects or the manual for the BESA seal of approval and the BESA concept.

Result:

The “before” measurement data and their key figures impressively substantiate, the stresses that the environment has on the human organism and, how the acupuncture points tested “after” became energetically charged after use of the “Power Seat Car” and the organism deregulates environmental pollution. the harmful fields become natural and biocompatible as assimilatable information for the body.

Due to the energizing effect, the subject's energetic regulation dynamics developed into the optimal effective range. This is particularly evident in the measurement between BESA tests before and after. All measurements improved significantly in the optimal regulation range for humans

Due to the positive results of the bioenergetic effect of the tested product, POWER SEAT CAR of the HiEnergy series, the requirements for receiving the BESA seal of approval from IPC Europe UG, Norbert Heuser, by the International Association for BESA for Project P51 3.1 were fulfilled.
