Authorized summary regarding the BESA seal of approval for the HiEnergy “Power Seat Chair”

The BESA tests were carried out by International Association of BESA in Austria on behalf of the company IPC Europe UG, Norbert Heuser, on the energetic effectiveness of “POWER SEAT CHAIR” the HiEnergy product series.

The tests clearly have shown that the “POWER SEAT CHAIR” is capable of nullifying negative biologically important effects while energizing (energy-increasing) positive effects.

The BESA “after” tests carried out within the spherical range of the POWER SEAT CHAIR” showed significant improvements in the measuring circuit compared to the “before” test.

All BESA tests were carried out according to the requirements for the BESA projects or the manual for the BESA seal of approval and the BESA concept.

Result:

Although the subject was within existing technical interference fields during the BESA test, a significant increase in energy in the optimal measuring range was found at all body measuring points, regardless of the strength of the interference fields.

The “before” measurement data and their key figures impressively substantiate, the stress loads that the environment has on the human organism and how the acupuncture points tested “after” became energetically charged after use of the “POWER SEAT CHAIR” and the organism deregulates environmental pollution the harmful fields become natural and biocompatible as assimilable information for the body.

Due to the energizing effect, the subject's energetic regulation dynamics developed into the optimal effective range. This is particularly evident in the measurement between BESA tests before and after. All measurements improved significantly in the optimal regulation range for humans.

From the standpoint of BESA, one can speak clearly of a significant improvement in the body's energy situation.

Due to the positive results of the bioenergetic and subordinate to the biological effect of the tested product “Power Seat Chair” of the HiEnergy series, the conditions for the receipt of the BESA quality seal with 3 stars to the company IPC Europe UG, Norbert Heuser, by the International Association for BESA for Project P51 3.0 were fulfilled.
