Authorized summary regarding the BESA seal of approval for the HiEnergy “ROOM ENERGIZER”.

The BESA tests were carried out by International Association of BESA in Austria on behalf of the company IPC Europe UG, Norbert Heuser, addressing the energetic and physical effectiveness of the fitted shoe inlay “ROOM ENERGIZER” from the HiEnergy product series.

The tests have clearly shown that the ROOM ENERGIZER is able to have significant energizing (energy-increasing) effects in the meridian system of human bodies. The BESA “after” test showed significant improvements after a short time (seconds range) compared to the “before” test.

All BESA tests were carried out according to the requirements for the BESA projects or the manual for the BESA seal of approval and the BESA concept.

Results:

Although the subject was within existing technical interference fields during the BESA test, a significant harmonization in the optimal measuring range was found at all body acupuncture measurement points, regardless of the strength of the interference fields.

The “before” measurement data and their key figures impressively substantiate the stress burdens caused by the environment on people and their organisms and, in the “after” test, how, after introducing the energy-enhancing ROOM ENERGIZER technology, they are converted back into natural body-inherent and biocompatible information.

These bioenergetic values represent a crucial basis for cell activity, oxygen uptake and above all for detoxification. Additionally, the energetic regulation dynamics developed into the optimal effective range. This is particularly evident in the measurements between BESA tests before and after.

From the standpoint of BESA, one can speak clearly of a significant improvement in the body's energy situation.

Due to the positive results of the bioenergetic and subordinate to the biological effect of the tested product “ROOM ENERGIZER” of the HiEnergy series, the requirements for receiving the BESA seal of approval with 3 stars to the company IPC Europe UG, Norbert Heuser, by the International Association for BESA for Project P51 1.1 were fulfilled.
