Authorized summary regarding the BESA seal of approval for the HiEnergy “SOLE” shoe inlays.

The BESA tests were carried out by International Association of BESA in Austria on behalf of the company IPC Europe UG, Norbert Heuser, addressing the energetic and physical effectiveness of the fitted shoe inlay “SOLE CLASSIC” from the HiEnergy product series.

The tests have shown that HiEnergy SOLE CLASSIC is able to produce significant energetic harmonizing effects biologically. The BESA “after” tests carried out within the scope of HiEnergy SOLE CLASSIC, showed significant improvements in the measuring tool, compared to the “before” test.

A

All BESA tests were carried out according to the requirements for the BESA projects or the manual for the BESA seal of approval and the BESA concept.

Results:

Although the subject was within existing technical interference fields during the BESA test, a significant increase in energy in the optimal measuring range was found at all body measuring points, regardless of the strength of the interference fields.

The “before” measurement data and their key figures impressively substantiate the stress loads that the environment has on the human organism. For the “after” test, with the introduction of HiEnergy SOLE, the tested acupuncture points were energetically charged and the organism’s handling of deregulating fields became natural and biocompatible as assimilable information.

Due to the energizing effect, the subject's energetic regulation dynamics developed into the optimal effective range. This is particularly evident in the measurements between BESA tests before and after. All measurements improved significantly in the optimal regulation range for humans.

From the standpoint of BESA, one can speak clearly of a significant improvement in the body's energy situation.

Due to the positive results of the bioenergetic and subordinate to the biological effect of the tested product “SOLE CLASSIC” of the HiEnergy series, the requirements for receiving the BESA seal of approval with 3 stars to the company IPC Europe UG, Norbert Heuser, by the International Association for BESA for Project P51 1.8 were fulfilled.
