Authorized Summary

Project P52 for the BESA seal of approval „Pet Mat“

The BESA tests carried out by IFVBESA on the energetic and physical effectiveness of the test object, the "Pet Mat", have clearly shown that this test object is able to neutralize or harmonize biologically significant stress factors at the acupuncture points of the test subjects. Via the bio-energy-informative system analysis, the effect of the above-mentioned stress factors on the animal test subjects, its meridian systems and its energy-informative-biological control circuits was scrutinized and systemically tested on the energy-informative level. The BESA tests BEFORE - AFTER show significant changes at the tested acupuncture points at the meridian system of the test person (animals). The measured data as well as their key figures impressively confirm on the one hand the stresses that are caused by the tested factors on the human organism, and on the other hand they clarify how after application of the test object, the "Pet mat", the deregulating energies are transformed into body-immanent and biocompatible energies.

From a holistic point of view, it can be assumed that the positive effect on the test subjects - animals also occurs with other animals. The fact that the positive influence by the "Pet Mat" with high precision is actually possible, shows clearly this test by the BESA-BEFORE-AFTER comparison opposite 6 different animals (test persons). All measured values improved significantly from the mostly 100% blue measuring range to the green, mostly 50 Skt. range (Skt = scale value), i.e. the range of optimal measured values. This means that an optimal regulation dynamic has taken place. Here one can clearly speak of an optimal, significant improvement of the body's own energy situation in the sense of the IFVBESA.

result:

The test persons - animals were connected with the test object in the BESA-AFTER testing. In contrast to the BESA BEFORE tests, in which the test object, the "Pet Mat" was not used, consistently positive measurement results were found, which indicate that neutralization or harmonization has taken place. The regulation dynamics developed into an optimal effective range.

By proving the energy informative effectiveness of the test object "Pet Mat S and Pet Mat L" towards pets in this project P52, the requirements for obtaining a BESA seal of approval with 5 stars by the International Professional Association for BESA were fulfilled.
