Authorized Summary to the BESA seal of approval Hi Energy Wand 2 Body Fit

The BESA tests on the energetic and physical effectiveness of the test object carried out by IFVBESA on behalf of the company IPC Europe UG have clearly shown that the test object is able to neutralize biologically significant stress factors including electromagnetic interference fields and to show corresponding protective effects. By means of the bioenergetic system analysis, the effects of the stress factors on the human and animal test subjects were questioned and systemically tested on the energetic level. The BESA tests „before – after“ showed significant changes at the tested acupuncture points of the meridian system.

Results:

Although the subjects were within the effective range of certain toxic substances during BESA testing, significant harmonization into the optimal measurement range was observed by applying the test object to all body acupuncture measurement points, regardless of the nature of the toxic stresses.

The BESA measurement data substantiate, on the one hand, the stresses caused by the environmental toxins on the human being and his organism and, on the other hand, how after the application of the test object these were transformed back into a body-immanent and biocompatible information.

These bioenergetic values represent a decisive basis for cell activity, oxygen uptake and, above all, detoxification.

This can be seen particularly clearly in the measured values between BESA testing before and after. All measured values improved significantly into an optimal regulatory dynamic.

By proving the energy efficiency of the test object, the requirements for obtaining the BESA seal of approval with 5 stars by the International Professional Association for BESA were met.
